

ABSTRACT OF THE DISCLOSURE

An applicator for treating mouth pain includes a generally cylindrical container having a fluid reservoir therein, a dispensing orifice at one end of the container in fluid communication with the reservoir, a plurality of soft bristles protruding outwardly from the orifice acting as a partial closure for the orifice and which act as an applicator for fluid in the reservoir, means for forcing fluid from the reservoir to the bristles, and a composition contained in the reservoir for treating mouth pain. A method of applying a fluid composition for treating mouth pain includes the use of the applicator with the fluid composition for direct application to all areas of the mouth.
